The coherent light emitted from the Vogel tuned crystal is able to penetrate the often disparate radiant fields within and around a distressed individual. An incoherent energy is often dissipated if not completely absorbed by the chaotic field generated by the distress. Beyond this the most profound effect of the faceted crystal has to do with its relationship and resonance to water. Because ...

Light coming straight up from the source hits the surface perpendicularly (zero angle of incidence, relative to the normal to the surface) but light not straight up strikes at some angle of incidence other than zero. As you go farther and farther away from the straight up point, the angle gets bigger and bigger. Eventually the angle becomes greater than the critical angle and no light can escape.

It controls the aperture (diameter) of a hole through which light passes. In bright light, a small aperture is used to cut down the amount of light reaching the film and in dim light, a large hole is needed. Very large apertures give blurred images because of aberrations so the aperture has to be reduced to obtain clear images. In many cameras, the amount of light passing through the lens can be ...
